Thank you.

I appreciate you for taking the time out of your day to view my graphic design portfolio. There are a couple of skills that I was not able to portray in this portfolio, such as motion graphics and video editing; in which, I would describe myself as talented in both of these topics, with similar skill levels as showcased in this portfolio.

I also have talents in other areas, such as **Software Development** and **Computer Science**, which I started learning prior to graphic design. Subsequently, I started learning graphic design to design and develop user interfaces and branding for my applications, quickly taking a liking to the subject in its own right.

Over time, I have recognised that software development and graphic design distinctively complement one another. Furthermore, they are some of few primary aspects in creating a successful business in this day and age, with social media marketing and effective internal systems as examples.
